

BPL is a terrible idea that is fueled by commercial interests of poorly funded power companies that want to make the bottom line better. It has been banned in Japan and Europe. It would cause 50 microvolt or better interference to low-band Police, Short Wave broadcast, amateur radio, Citizen's band.

It must not be allowed. Broad-band high-speed internet must be provided useing SHIELDED wire (CATV, DSL)!!!!!!

What in the world was the FCC thinking to approve it? Does the Chairman have any telecommunications knowledge at all?
